

**Special session:** Computational Intelligence for Water Sustainability

**Session Organizers:** Snehasis Mukhopadhyay and Meghna Babbar-Sebens

**Abstract:** This session focusses on innovative research in the area of computational algorithms, frameworks, and environments that are being developed to advance the field of Water Sustainability, while also improving the understanding of Sustainability Science and Engineering. Problems in Water Sustainability can be related to challenges in planning, management, and operations of water resources, water infrastructure, etc.
